TITLE : Smart Queue Management System for Elderly & Persons with Disabilities Using Adaptive Priority Scheduling.

STEP 1 : Problem Statement

Government Offices, banks, hospitals & public service centers often have long waiting queues. Elderly citizens & persons with disabilities face difficulty standing for long periods & usually have no information about waiting time.

Therefore, we propose a Smart Queue Management System that allows users to book digital tokens, receive adaptive priority based on accessibility needs, view live queue status, & receive notifications before their turn.

STEP 2 : User Requirements

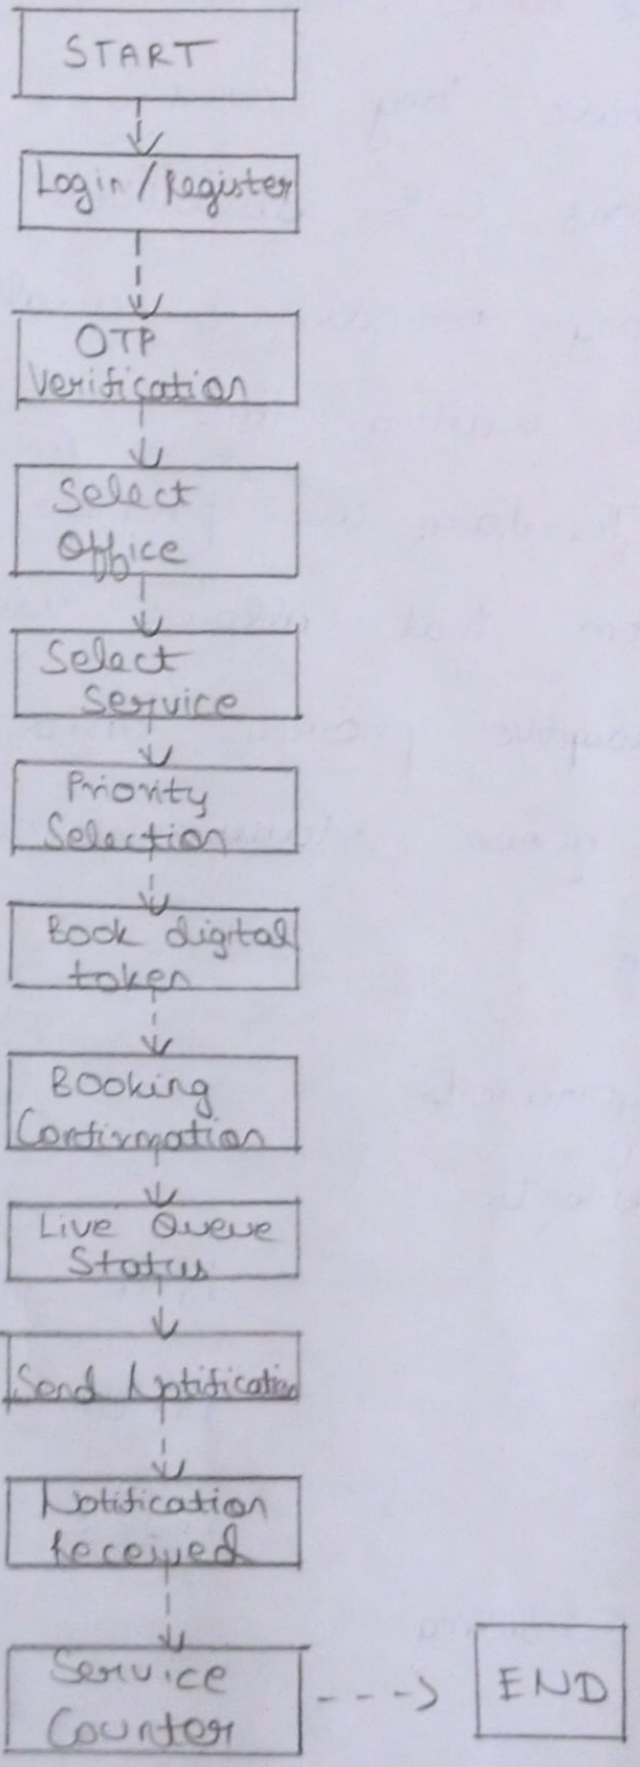

Functional Requirements :

- User login
- OTP Verification
- Token Booking
- Adaptive Priority Scheduling
- Notifications
- QR Code Generation
- Admin Dashboard
- Live Queue Tracking

Non Functional Requirements:

- Easy to use
- Mobile Friendly
- Secure
- Reliable
- Accessible
- Fast Queue Updates

STEP 3: Screen Flow Diagram

STEP 4: Wireframes (Low Fidelity)
